

Executive Summary – NaijaFuelWatch

Overview

NaijaFuelWatch is a digital solution developed by Lewisham Multi Solutions Ltd to bring transparency, traceability, and accountability to Nigeria's petrol (PMS) subsidy system. The app offers a fully digitized and visualized process of PMS importation, discharge, and subsidy payments, from vessel arrival at Nigerian waters to final verification and payment by the Central Bank of Nigeria (CBN).

The Challenge

The petroleum subsidy system in Nigeria is plagued by opaque operations, falsified documents, and unverifiable delivery claims. Vessels discharge PMS into tank farms without consistent logs, and many Independent Petroleum Marketers (IPMs) present questionable documents for subsidy claims. The existing system lacks real-time verification, audit trails, or public visibility.

The Solution

NaijaFuelWatch solves this through a simple, role-based dashboard platform with the following features:

- **Vessel Tracking:** Real-time view of PMS vessels arriving Nigerian ports
- **Discharge Monitoring:** Logs every ullage reading before and after discharge at tank farms
- **Document Center:** Upload, review, and verify subsidy-critical documents (NOR, COQ, PC, BOL, etc.)

- **Timeline Tracker:** Step-by-step process from import permit to CBN payment clearly shown
- **Audit Log:** Full visibility of who did what and when
- **Public Portal:** Real-time stats on vessels, volumes, and payments (non-sensitive data)

The Impact

- Eliminates ghost vessels and duplicate subsidy claims
- Builds trust in subsidy process across CBN, FMF, NNPC, and public
- Empowers the Senate and Presidency with real-time fuel import data
- Offers digital transformation without major training or infrastructure burden

End Users

- Independent Petroleum Marketers
- Tank Farm Operators
- NNPC and CBN auditors
- Senate and Federal Ministries
- General public (read-only dashboard)
